Endopuls 811

What is shockwave therapy?

Shockwave therapy is successfully used for the treatment of muscle/tendon tissue and tendon insertions. Shockwaves are high energy sound impulses. The energy released in the treatment area improves the metabolism and blood circulation, thereby stimulating the body's self healing repair mechanism. Shockwave has many advantages. A few examples are:

- Short treatment time per session
- High percentage of successful treatments after only a few sessions
- Makes medication and/or surgery superfluous

The effectiveness of shockwave therapy is sufficiently proven by scientific research.

Radial shockwave therapy

Endopuls 811

What is the Endopuls 811?

The Endopuls 811 is a compact, and complete shockwave unit. This ideal shockwave therapy device is safe, comfortable and user-friendly, as well as cost-effective and space-saving.

Compact

The Endopuls 811 does not need a compressor, as it has an electromagnetic system. The electromagnetic system is small, light and mobile and requires little maintenance. The projectile in the ergonomic handpiece is electromagnetically activated.

Mobile

The Endopuls 811 is supplied in an aluminium case with all the necessary accessories, such as various applicators and a foot switch. Easy to transport and everything at hand for a complete treatment.

Little maintenance, long lifetime

The Endopuls 811 needs very little maintenance. The ergonomic handpiece can be used for at least 2 million shocks (about 1000 treatments) before it needs a revision.

Endopuls 811

The Endopuls 811, the complete unit

- The handpiece has an ergonomic design and is made of a heavy quality aluminium. Due to the handpiece's own weight less pressure is required by the therapist, it gives better intrinsic and vibration cushioning to protect the therapist, and a perfect dosage of energy transfer to the patient.
- Extremely easy to use: operated via the clear touchscreen.
- The energy is set precisely and displayed in mJoules, informing the therapist about the energy transferred to the tissue.

The ideal unit for radial shockwave therapy, suitable for every practice

Standard accessories

- 1650800 Hand-piece, complete with a 15 mm applicator
- 1650808 Holder for hand-piece
- 1650801 25 mm a applicator
- 1650802 15 mm applicator
- 1650803 6 mm applicator
- 1650804 Silicon covers, 10 pcs
- 1650805 Endopuls lotion, bottle 250 ml
- 1650810 Foot switch

- 1650807 Applicator measurement tool
- 1650809 Carrier case
- 1650751 Operating manual
- xxxxxxx Mains cable

ORDERING DATA

Endopuls 811

TECHNICAL SPECIFICATIONS

Dosage / Energy settings:	60 mJ to 180 mJ in steps of 10 and 180 mJ - 185mJ (at 16 Hz maximum 120 mJ and at 22 Hz maximum 90 mJ). In comparison with a pressure-driven unit this is: 1 / 2 / 3 and 5 Bar.
Save and update:	on SD cards
Handpiece:	Ergonomic, anodised aluminium housing.
Dimensions device:	length 35 cm, width 25 cm, height 14 cm
Dimensions handpiece:	length 23 cm, 5 cm diameter
Weight device	appr. 2,7 kg
Weight handpiece:	appr. 0.85 kg (with cable)
Service life:	minimum of 2,000,000 shots
Applicators:	6 mm, 15 mm and 25 mm diameter, with a minimum life time of 150,000 shots
Electrical connection:	100 – 240 VAC / 50-60Hz 2.5A
Approvals:	IEC/ EN 60601-1

This is a medical device. It complies with all applicable medical regulations. For more details please consult the instructions for use (downloadable via www.enraf-nonius.com).

 (Only applicable for the 1650902.)
